CLAIM 1 IS CANCELLED

2. A disposable lid for a cup comprising an annular clamp adapted to be seated on a rim of the cup, said clamp having inner and outer lips to grip inner and outer walls of a lip of the cup inserted therebetween and a frustoconical spout extending upwardly from said rim to a discharge port at an apex thereof, said spout having a truncation in the shape of a horizontal plane tangent to a bottom wall of a horizontal cylinder and a base inside diameter equal to a top inside diameter of said clamp wherein an inner wall of said clamp and an inner wall of said spout converge smoothly to said discharge port.

- 3. A lid according to claim 2, said clamp comprising an annular rim having inner and outer edges and a bottom face adapted to be seated on a rim of the cup, an inner lip extending downwardly from said inner edge and an outer lip extending downwardly from said outer edge of said annular rim, said inner and outer lips being cooperable to grip a lip of the cup inserted therebetween.
- 4. A disposable lid for a cup comprising a circular rim having inner and outer edges and a bottom face adapted to be seated on a rim of the cup, an inner inverted frustoconical lip extending downwardly from said inner edge and an outer frustoconical lip extending downwardly from said outer edge, said inner lip having serrations therein and said outer lip having nodules on an inner wall thereof, said inner and said outer lips being cooperable to grip a lip of the cup inserted therebetween, and a frustoconical spout extending upwardly from said lid rim to a discharge port at an apex thereof, said spout having a truncation in the shape of a horizontal plane tangent to a bottom wall of a horizontal cylinder and a base inside diameter equal to a top inside diameter of said inner lip wherein an inner wall of said inner lip and an inner wall of said spout converge smoothly to said discharge port.

Art Unit: 3700

- 5. A lid according to claim 4, said spout having approximately radial vertical walls extending upwardly from a horizontal portion of said truncation to a cylindrical portion of said truncation.
- 6. A fid according to claim 4 further comprising means in a horizontal portion of said truncation for permitting insertion of a straw through said spout into the cup.
- 7. A lid according to claim 4, said nodules being aligned between said
 serrations.
- 8. A lid according to claim 4, said discharge port being approximately
 rectangular.

11

- A lid according to claim 4, said spout having a height not less than 1/4 and not more than 3/4 of said base inside diameter.
- 10. A lid according to claim 4 being integrally formed of plastic and having a thickness of approximately 15 mils.
